

HQP LiDAR Feature Cruising Dictionary Quick Ref

Print Version Date: 3 4 -18

BRANCHES

(Br)

- **0** Pruned or Clear
- 4** 4cm Max
- 7** 7cm Max
- 1** 10cm Max
- 2** 15cm Max
- 99** Branch over 15cm

Branch assessment is crucial to stand yield estimates, calibrate yourself regularly using In-Tech Laser Callipers and Branch Disks

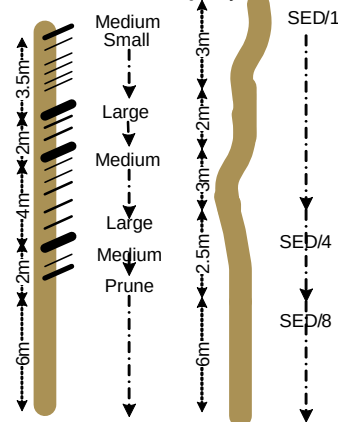

All knots measured right angles to stem

Prune Height to Branch at Pith

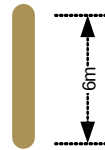

UPGRADE RULES

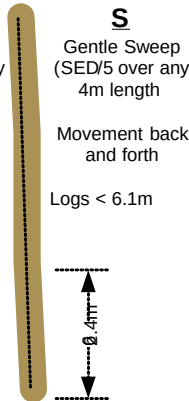

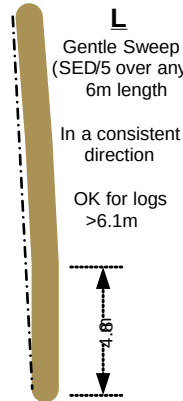

Only Upgrade Branch or Sweep Class (to Smaller Branch Class or Better Sweep Code) if >3m Section Between Zones of Lower Quality

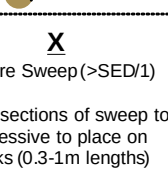

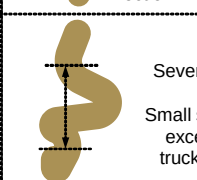

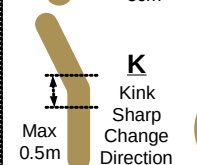

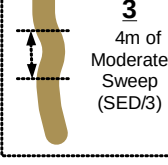

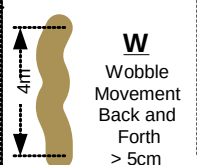

SWEEP (Sw)

8
Gun barrel Straight (max SED/8)

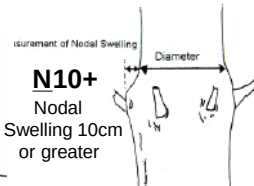

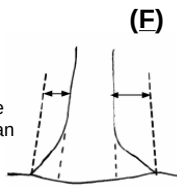

Generally Pulp Quality

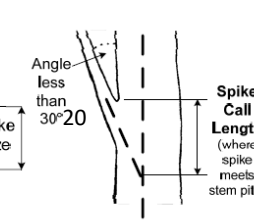

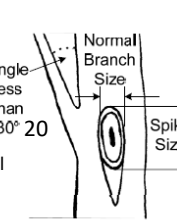

FEATURES (F)

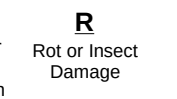

B10+
Butt Flare greater than 10cm

S7+
S10+
S16+
S25+
Spike Knots call over total length effected by spike

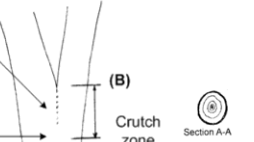

D
Damage or Scarring >10% depth

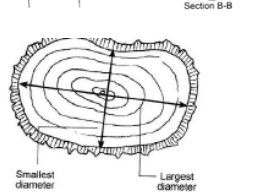

R
Rot or Insect Damage

C
Crutch or Reduction Only if greater than >0.5m

O1.2
Excessive Ovality
>1.2x smallest vs largest
eg. 500mm smallest and >601mm largest

TREE CODES

Live Windthrown
(stem on lean >45deg, and or root plate lifted)

GUIDELINES

Heights
Measure all trees

Crutch/ Reductions
Assumed Lengths= 0.5m

Regeneration
Regen. has to be at least 1/2 mean crop heights to be FULL CRUISED Regen which is less than 1/2 mean crop will be counted (Regen Coun).

Remember to make comment about regen in Plot header (e.g. T7, T8 and T21 etc.). Comment on these within the individual tree (TrCom) as "Regen"

File Structure
One Plotsafe file with each plot in its own strata

Mirage Plots NONE, define with boundary location only

Dead and Rotten Trees
Measure DBH HT (and Broken Top)
Code Dead Rotten with feature code of R

Resin Assessment
Not Required

Green Crown Height On Height Trees

Template Name
LIR18-HQP

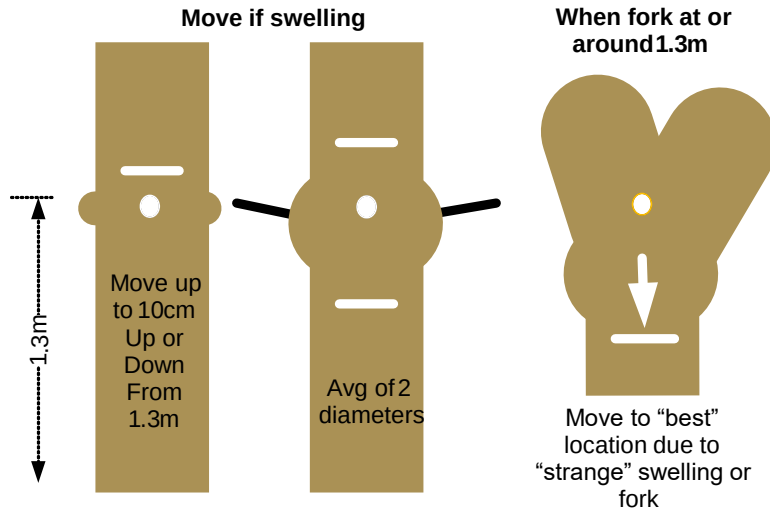

Always add you crew reference to the end e.g. -TB
e.g. LIR18-HQP -TB

Taking Diameters and Markings

DOT at 1.4m Mark
LINE where you take the diameter if not at 1.4m
ARROW if moved in single direction 10cm due to strange fork

Tree Markings

Boundary Definitions

STEPS

1. Use GPS to navigate to general locality
2. Consult map and identify and locate stand boundary
3. No mirage plots
4. Record boundary in Strata header using bearings / and or distances
5. Complete a sketch of the plot boundary
6. Use dripline for recording points on edge 1A / 1B

It is recommended to make a note in the comments of any decisions relating to edge plots
